With increasing incidence and mortality, **cancer** is the leading cause of death in **China** and is a major public health problem. Because of **China's** massive population (1.37 billion), previous national incidence and mortality estimates have been limited to small samples of the population using data from the 1990s or based on a specific year.

Abstract

BACKGROUND

Lifestyle factors such as body mass index (BMI), alcohol drinking, and cigarette smoking, are likely to impact the prognosis of gastric cancer, but evidence has been inconsistent.
