A **review** of the world **literature** reveals only 20 previous **reports** of **hepatoid carcinoma of the pancreas** (Table (Table1). 1). Most **reported** lesions were in the body and tail of the **pancreas**; only seven of 21 **cases** (33%) arose solely within the head or uncinate process. Most (62%) patients were men.

**Hepatoid carcinoma of the pancreas: A case report and review of the literature**

Zeng SX *et al.* Hepatoid carcinoma of the pancreas

**Abstract**

**BACKGROUND**

Hepatoid carcinoma (HC) is an extremely rare form of neoplasm that is morphologically similar to hepatocellular carcinoma. HC has been described in various organs; however, HC of the pancreas is extremely rare. To our knowledge, only 38 cases have been reported. We present a case of HC of the pancreas in a 36-year-old male patient.

**CASE SUMMARY**

A 36-year-old cachexic man with no significant past medical history was transferred to our hospital with a history of painless jaundice, elevated blood glucose and significant weight loss. Lab tests showed elevated serum transaminases, bilirubin and alpha-fetoprotein levels. Magnetic resonance imaging of the upper abdomen showed a diffusely enlarged pancreas, appearing "sausage-shaped". Magnetic resonance cholangiopancreatography showed upstream ductal dilation secondary to stricture of the main pancreatic duct and the common bile duct, which were not visible. Immunohistochemistry of biopsied tissue from a percutaneous pancreatic biopsy showed tumor cell positivity for HepPar1, polyclonal carcinoembryonic antigen and CK19, suggestive of HC of the pancreas. The characteristics of 39 patients with HC of the pancreas were reviewed.

A single **case** of **hepatoid carcinoma of the pancreas** is presented with long-term follow-up and **review of the literature**. This rare malignancy of the **pancreas** represents a **hepatocytic** transdifferentiation of **pancreatic** cells to form a combination of both primary ductal adenocarcinoma and hepatocellular differentiation.

**Hepatoid carcinoma of the pancreas** is a rare neoplasm with fewer than 25 **cases reported** in the literature. Typically defined as a neoplasm with features of **hepatocellular carcinoma outside of the liver**, **hepatoid carcinoma** has been found in multiple organs as a **primary tumor** [ 1, 7, 17, 18, 19 ].

## Carcinoma

Carcinoma is a category of types of cancer that develop from epithelial cells. Specifically, a carcinoma is a cancer that begins in a tissue that lines the inner or outer surfaces of the body, and that arises from cells originating in the endodermal, mesodermal or ectodermal germ layer during embryogenesis.
