The text is very long, with many abbreviations: could you reduce the number of abbreviations and the text length? You could discuss the role of antisecretory drugs, as Octeotride, during enteral nutrition.

To Authors The Abstract contains all the content of the paper. The Introduction shows the well known general data on the AP and the aim of the study. The development of the pathophysiology of malnutrition in course of AP is clear and complete, analyzing the various components of this complex clinical problem. The analysis of the evolution of the nutrition procedures used in the AP shows the steps that have followed over time. This section is well presented. The plan of nutrition management in AP is also complete and explores the clinical characteristics and the nutritional need of each degree of severity of AP, mild, moderate severe and severe. It's correct to analyze the various ways of administration of nutrients, with the examination of the detailed clinical characteristics. It's also justified to evaluate the possible use of some nutritional supplements. Very interesting the insertion of cases of practical clinical experience. The Conclusion contains synthetically the themes developed in the study. The References are up-to-date. The Tables and Figures are clear and appropriate. In summary this review is a very good work.

This manuscript entitled “Nutrition Management in Acute Pancreatitis” is a comprehensive and timely review that emphasizes the importance of nutrition interventions for alleviating the inflammation and complications in patients with acute pancreatitis. The practical considerations provided in this review may help to improve the management of acute pancreatitis. However, some concerns remain. (1) The novelty and impact of this work seem limited since no dramatic progress has been made in this field in the recent couple of years, and similar review papers have been published in other journals. (2) The review appears to be general and descriptive, lacking clear explanation and deep discussions of underlying mechanisms. (3) The figures could be made clearer and more intuitive, and the writing could be improved as well.
