SPECIFIC COMMENTS TO AUTHORS

This is an excellent review of the possible moderators and mediators of antipsychotic drug effectiveness in delusional disorder. Delusional disorder is a rare disease which has been poorly studied. However, the authors have made an extensive literature search and presented the findings in a comprehensive way. The title is correct and corresponds with the content of the paper as it clearly presents that a thorough analysis of moderators and mediators will follow. The structure of the manuscript is optimal and the reader has no difficulties in following the conceptual flow of the text. The language is scientific without grammatical and syntactic problems. Tables are relevant and references adequate.
