#### **SPECIFIC COMMENTS TO AUTHORS**

It is an interesting manuscript. Authors succeed to present their data in a clear way adding information to the existing literature. Therefore, I have no corrections to do and the manuscript can be published unaltered.

#### **SPECIFIC COMMENTS TO AUTHORS**

In the present study, the authors tried to investigate the relationship between diabetic polyneuropathy, serum visfatin and oxidative stress biomarkers. My comments are as follow: 1. Intruduction: too long and much about DN basic information, I suggest the author make it shorter and only focus on the importance of what will be done; 2.Method: they said they randomly chosen the patient but how? they didn't give the basic data of the patients which is very important. for example, what about the use of diabetic medication? long time use of metformin have been reported to correlated DN or B12 deficency. and what about other complications and diseases that combination with diabetes? I suggest the author could quartilize the data according to visfatin or other important oxidative biomarkers to see if this correlated with the seriousness of DN by trend chi-square test? 3. The discussion should focus on the results.

#### **SPECIFIC COMMENTS TO AUTHORS**

The paper format and organization should be greatly improved. The introduction section is long, and it can be shortened. Results were confusing. Give subheading titles in the Results section to more clearly demonstrate your results. Figures 1-6 can be combined into a whole figure. Language and grammar errors are frequent and should be improved.
