Authors reviewed some aspects regarding immunotherapy in non-small cell lung cancer (NSCLC) and some perspectives about the use of this therapeutic modality in the adjuvant scenario and in small cell lung cancer (SCLC), including immunotherapy as first line in metastatic nonsquamous NSCLC, after at least one line in metastatic nonsquamous NSCLC, metastatic squamous NSCLC, adjuvant scenario on NSCLC and SCLC that is considered the new standard in advanced and metastatic NSCLC, with or without chemotherapy. Furthermore, either in first-line or after at least one line, immunotherapy has presented good effects. Although, almost all the trials that tested immunotherapy showed immune-mediated adverse events and even deaths, and it is expected in a near future that new treatment schemes involving immunotherapy and its combinations will improve their application in clinical practice.

This is a well organized, historically summarized review on important clinical trials, thus very informative and tutorial. 1. The area of uncertain or challenges (such as markers other than IHC ATLAS) would make the paper more charming to the readers. 2. I am not native speaker of English, usage of non-small (this is very familiar way with hyphen) and nonsquamous look weird. I need editorial help on the usage of non-squamous. 3. On the 6th line from the bottom in page 7, "Zhou et al. (Data) " probably some reference numbers would be there in the parenthesis.
