Immunotherapy-new perspective in lung cancer

Abstract

Lung carcinoma is associated with a high mortality worldwide, being the leading cause of cancer death. It is mainly classified into squamous non-small cell lung cancer (NSCLC), non-squamous NSCLC, and small cell lung cancer. However, such malignancy has been increasingly subdivided into histological and molecular subtypes to guide treatment. Therapies can be used in adjuvant

After diagnosing and staging lung cancer, your doctor will decide the best treatment. There are various treatments available based on your diagnosis. This includes chemotherapy and radiation to kill cancer cells, or surgery to remove cancerous tumors. Your doctor may also recommend immunotherapy along with these treatments. If you're a candidate for immunotherapy, current therapies include PD-1 inhibitors. These are appr...
