

PEER-REVIEW REPORT

Name of journal: World Journal of Gastroenterology

Manuscript NO: 53786

Title: The prognostic significance of hepatic encephalopathy in patients with cirrhosis treated with current standards of care

Reviewer's code: 02542077

Position: Peer Reviewer

Academic degree: MD, PhD

Professional title: Adjunct Professor

Reviewer's Country/Territory: Brazil

Author's Country/Territory: Australia

Manuscript submission date: 2019-12-31

Reviewer chosen by: Ruo-Yu Ma

Reviewer accepted review: 2020-01-13 13:17

Reviewer performed review: 2020-01-13 14:56

This retrospective study was performed in 3 Australian Centers, and despite being retrospective had a methodology that minimized this problem. One question: Why did the authors included patients with non-HCC neoplasia? Would this inclusion not compromise survival outcomes?

SPECIFIC COMMENTS TO AUTHORS

We suggest, if possible, to discuss the factors that cause hepatic encephalopathy (HE): are they specific or common with other complication of cirrhosis, as portal hypertension, ascites, etc.? I think that HE represent a multi-factorial complication in the frame of cirrhosis, correlated with an advanced disease. Differently, it could be supposed that HE is a proper metabolic complication, caused by a simple impairment of one or multiple biochemical functions, correlated with a volumetric decrease in liver functioning parenchyma, or with an superimposed external aggression. In this case the test of green indocyanine could be a good prognostic index. This could be useful to better understand the importance of an early diagnosis of HE and of a long-term treatment.
