#### **SPECIFIC COMMENTS TO AUTHORS**

This retrospective interview-based study was performed to assess the satisfaction of parents of pediatric liver transplantation (LT) patients and that of parents of pediatric chronic liver disease (CLD) patients, using two difference scales (PedsQL scale IFS). I have the following comments. (1) In LT group, do all pediatrics undergo deceased-donor liver transplantation? Otherwise, do anyone undergo living-donor LT form their parents? (2) In results, style of sentences such as “statistically significant differences were found between groups in terms of” is difficult for me to understand which group is significantly better. There are many same styles of sentences, and thus I had a hard time to understand the results. Furthermore, you use two scales; however, there is no explanation concerning the difference between the two scales. Doe high scales mean high quality?

## RE-REVIEW REPORT OF REVISED MANUSCRIPT
