SPECIFIC COMMENTS TO AUTHORS

This is an interesting case report about a novel therapeutic option for a rare form of cancer for which there is no established treatment. I hope that the authors may find my humble comments below useful.

1. Please provide more detail regarding treatment outcome and follow-up. In the current version of the manuscript it was stated that “The clinical status of the patient showed dramatic improvement with resolution of chest pain, chest tightness, and cough”. It would be very important to state how long it took after the start of apatinib + doxorubicin + cyclophosphamide for the patient to start experiencing clinical improvement in terms of improvement / resolution of chest pain and cough. It would also be very important to provide information regarding how long the patient was under the combined therapy and when the patient stopped taking doxorubicin + cyclophosphamide.

2. It is not clear whether and when (?) the patient became completely asymptomatic during follow-up.

3. Page 6, second paragraph: “The P-EHE patient who received apatinib for a month showed dramatic improvements in clinical presentation and on CT imaging.” Please substitute “A patient” for “The patient” in that sentence because there was no prior information about the case of that patient. Was it because of that case report that the authors decided to try apatinib in their own patient?

Page 2, Abstract, case summary: Please substitute “gefitinibe” for “Iressa”. The same observation applies to the last paragraph of page 3.

Page 5, first paragraph: please substitute “confirmed the diagnosis of P-EHE” for “conformed the diagnosis of P-EHE”.

Page 5, first paragraph of the discussion section: “EHE demonstrates a low-to-intermediate malignancy and has metastatic potential...”. That sentence is not clear. What does low-to-intermediate malignancy mean?

Page 6, first paragraph: please substitute “Thereafter, the patient did not undergo...” for “Thereafter, the patient had not undergo...” Additionally, please describe in that sentence for how long that patient

SPECIFIC COMMENTS TO AUTHORS

This is an interesting case report that demonstrates a combination of Apatinib with doxorubicin/cyclophosphamide may represent an effective therapeutic approach for rare disease pulmonary epithelioid hemangioendothelioma (P-EHE) treatment. In the introduction section, more information about the disease's morbidity, diagnosis, prognosis etc. should be also briefly introduced and reviewed. And in the discussion section, more references should be cited and reviewed to elucidate the physiological and pathological features of the disease and then its response to the recommended therapy. The manuscript displays some language errors that need to be carefully rectified.
