In the manuscript entitled 'Formulation Strategies in Immunotherapeutic Pharmaceutical Products', Zhang and colleagues reviewed the formulation strategies and excipients that have been used in commercialized Ab products, but the following points need to be improved. 1. Less than half of the references cited in this manuscript were published within 5 years. It needs to be revised. 2. Formulations and excipients were simply listed in antibody-based biopharmaceutical products. Precise strategies should be stated in the manuscript. 3. The conclusion section should add some of the author's own insights.

For me, as a pharmacologist, this was a very interesting review to read. A kind of "putting into one place" all relevant general information and principles on the important topic of formulation of biologicals. I have no comments to authors. The review is informative and well written.
