The authors reviewed technical aspects and clinical outcomes of several therapeutic approaches in patients with malignant gastric outlet obstruction (MGOO). There is one comment. Comments In patients with MGOO, laparoscopic gastrojejunostomy (GJ) is widely performed as a surgical approach. However, in fact, surgical approach has been developed and several surgical procedures has been added in laparoscopic GJ. Arigami et al. reported the clinical utility of stomach-partitioning GJ with Braun enteroenterostomy in patients with MGOO caused by unresectable gastric cancer (Anticancer Res;36:5431-5436, 2016). The authors should discuss about a novel surgical approach for laparoscopic GJ.
