SPECIFIC COMMENTS TO AUTHORS

Major Comment. The authors provide a very detailed account of a clinical case and raise a pathogenetic hypothesis. While the description is adequate, there is little direct evidence for the proposed pathogenetic mechanism (namely that bone-marrow suppression is an antineoplastic defense) in the clinical data. Interpretation of the patient's data should be done with great caution, because this patient received a very large number of distinct treatments over many years, each one of which may have contributed to this unfavorable outcome. Minor comments. "driver of the deranged autoimmunity" - I suggest to change to "the driving force behind the autoimmune disorder". "A reduced ratio of CD4+/CD8+ cells confirmed the cellular immune-mediated response [1,2]". This sentence is unclear. Why should a reduced ratio of CD4+/CD8+ cells provide evidence of cellular immune-mediated response, and against what antigens would this response be directed? I found the photomicrographs not very useful. The reader might be helped by the inclusion of arrows pointing to the cells specifically bearing features of interest referred to in the text.

SPECIFIC COMMENTS TO AUTHORS

The present clinical case reports a 30-y.o. patient with severe aplastic anemia who developed hematological response to gut inflammatory condition treatment. My main concern regarding this manuscript is in its structure. The whole text is presented in a single body text. My opinion is that the whole manuscript should be structured into specific sections, depending on the journal requirements. Also, it would be much better if the presented laboratory results are ordered into tables. No abstract was provided, thus it was not reviewed.

SPECIFIC COMMENTS TO AUTHORS

Clear recommendations arising from the lessons learned from this case study should be included for the benefit of scientists and clinicians working in this field. Minor points

Line 4: "...by theses unwanted..." Line 11: "...mechanisms imposed on HSPCs" instead of imposing Line 38: "Referances:" Figure 3 figure legend: The word proposition needs to be replaced (proportions?).
