SPECIFIC COMMENTS TO AUTHORS

Title can be modified. Abstract: satisfactory. Case report: Well documented. Discussion is quite elaborate and provides most of the details. However in the said case there was no need to consider hepatic hydatid as one of the differentials. The imaging findings are quite clear. Conclusion is quite satisfactory.

SPECIFIC COMMENTS TO AUTHORS

It is a well-written manuscript. The patient's information is detailed and the pathology result is clear and confirmed. The discussion part is thorough. But I have to say that missing data of CEA, AFP and HCG is a little drawback. And in the second paragraph of Case Presentation-Imaging examinations, 10UH should be 10HU.
