SPECIFIC COMMENTS TO AUTHORS

A well written article, highlighting EFTR of a duodenal adenoma utilising OVESCO. However need minor revision and attend 1. a grammatical errors (eg; eFTR - EFTR, under Laboratory examinations Complete blood count, complete metabolic panel and prothrombin time/international normalised ratio were WAS all within normal limits etc) 2. Case presenation can be condensed in two paragraphs (symptoms to imaging in one paragraph and treatment in to the other 3. Expand whether sedation or anesthesia used under tratement BW).

SPECIFIC COMMENTS TO AUTHORS

Dear Author: I have read with interest the manuscript "Repeat FTRD use for recurrent duodenal adenoma after previous full-thickness resection – A case report" by Gericke and coworkers. The case is very interesting for the readers of WJGE and WJG. They report a successful recurrent EFTR of a duodenal adenoma using the gastroduodenal full-thickness resection device. This is usually a technique used in the resection of colonic adenomas, and the authors used successfully in the resection of duodenal adenoma. The manuscript can be published after minor review and English polishing.
