

## **Answer reviewers' questions**

Dear editor,

I have revised the manuscript according to the reviewers' questions. The changes of manuscript were showed as following:

1. This article is of interest since it describes novel coronavirus pneumonia that has an atypical presentation. However, there are several issues that require correction. Major: According to the JAMA article (Wang D, Hu B, Hu C, Zhu F, Liu X, Zhang J, Wang B, Xiang H, Cheng Z, Xiong Y, Zhao Y, Li Y, Wang X, Peng Z. Clinical Characteristics of 138 Hospitalized Patients With 2019 Novel Coronavirus-Infected Pneumonia in Wuhan, China. JAMA. 2020 Feb 7. doi: 10.1001/jama.2020.1585. [Epub ahead of print]), approximately 10% of those infected with "COVID-19" present with diarrhea. Similarly, the article in JAMA includes a certain amount of information on frequencies of each symptom; thus, these should also be included in Discussion of the main text. Minor: The World Health Organization (WHO) named the "novel coronavirus pneumonia" "COVID-19" on February 11, 2020. All references to the "novel coronavirus pneumonia" should be revised accordingly to "COVID-19".

Yes, I added the reference (Wang D, et al.) to the discussion of the main text.in page 8, line 209.

2. This is an important case report addressing the diagnosis of an atypical case of coronavirus infection. The case is well presented. I only have one suggestion: In line 257, omit "Other promising"

Yes, I have omitted "Other promising" in page 11, line 274.
