Acantholytic dyskeratotic acanthoma: case report and ...

https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4131993

Jul 31, 2014 · The features of a patient with solitary, non-genital, acantholytic dyskeratotic acanthoma are presented and the literature on acantholytic dyskeratotic acanthomas is reviewed. Using PubMed the following terms were searched and relevant citations assessed: acantholysis, acanthoma, cutaneous, dyskeratosis, nail, warty.

Introduction

Case Report

Discussion

Epidermolytic acanthoma (EA) is a rare benign tumor that is characterized by epidermolytic hyperkeratosis on histopathology. It was first described in 1970 by Shapiro and Baraf who reported 6 cases of solitary lesions and 1 case of multiple lesions on the scrotum that clinically resembled condyloma acuminatum. Epidermolytic acanthoma usually presents in adulthood as an asymptomatic tumor less than 1 cm in diameter wit...

Mar 26, 2012 · Though most individuals have only one acanthoma, there have been rare reports of individuals who have developed many. The exact cause of acanthoma is not known; it is sometimes called a benign tumor, and sometimes described as the result of inflammation. Acanthomas are not considered dangerous and do not require treatment, but they may be removed for cosmetic reasons or ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4131993>

Jul 31, 2014 - Our patient was a 72-year-old woman with a non-healing eroded plaque underneath the breast. In our **review of the literature**, we were able to find 30 patients whose skin lesions presented as solitary, non-genital plaque, usually between 5 mm to 1 cm in size. Cutaneous acantholytic dyskeratotic **acanthoma** most commonly occurred on the trunk of women.

Abstract

BACKGROUND

Epidermolytic acanthoma (EA) is a rare benign skin lesion, usually found in the genital area of men and women, with epidermolytic hyperkeratosis as its distinguishing histologic characteristic. It is commonly misdiagnosed as condyloma acuminatum, verruca, and seborrheic keratosis. Since this lesion is benign, treatment is not necessary. However, it is often misdiagnosed, and patients are likely to undergo incorrect counseling and unnecessary treatment, causing undue burden to the patient. This study seeks to increase awareness of this rare condition to prevent future
