The manuscript by Zhang X., et al. is clear, concise and well described synthesis on the rather peculiar subject of lymphoma of the salivary gland. I have only a minor suggestion: The title might indicate that “Research Progress” leads to the idea that a major content of this review is in research when it does not describe recent advances either in diagnosis or in therapeutics. As the authors point out in the Introduction I think that the most relevant issue rests on the fact that “complexity of the diagnostic process can lead to a misdiagnosis or a delayed diagnosis” (P3,p3,L3-4). Thus, I think that the title could include something like “relevance on the diagnosis of ...” rather than “Research Progress”.

This is a review article on malignant lymphoma of the salivary gland. It is written extensively and simply so that non-oncologists can easily understand. It is informative and will give useful information to readers. However, there are some problems that the authors should clarify and revise as mentioned in the comments below.

1. Introduction, page 6, 3rd paragraph, and Table 1 A total of 16 reports are shown in Table 1. Are they all of reports discovered from PubMed or a part of them? Please clarify it. If they are a part, please show the reason why they were selected.
2. Treatment and prognosis, page 12 As stated in this section, radiation therapy is frequently applied for the treatment of malignant lymphoma. I suggest adding the standard radiation dose used for this disease to the text.
3. Table 1 There are no items in this table. Please give them.
