

## PEER-REVIEW REPORT

**Name of journal:** World Journal of Clinical Cases

**Manuscript NO:** 54912

**Title:** Fungal periprosthetic joint infection after primary total knee arthroplasty combined with ipsilateral intertrochanteric fracture: a case report

**Reviewer's code:** 03998375

**Position:** Editorial Board

**Academic degree:** MBChB, MSc

**Professional title:** Assistant Professor

**Reviewer's Country/Territory:** Iraq

**Author's Country/Territory:** China

**Manuscript submission date:** 2020-02-25

**Reviewer chosen by:** Jin-Lei Wang

**Reviewer accepted review:** 2020-06-17 12:52

**Reviewer performed review:** 2020-06-18 22:12

**Review time:** 1 Day and 9 Hours

## **SPECIFIC COMMENTS TO AUTHORS**

**Title** The infection is due to candida, therefore it is better to mention in the title as candidiasis instead of fungal infection: (Candidal periprosthetic joint infection....)

**Abstract** The abstract is too long that should be reduced with inclusion only significant

**information.** **INTRODUCTION** The last paragraph in the Introduction should include

only the aim of case report while most other information should transmitted to case

presentation. The following statements should be removed from the last part of the

Introduction: (The case was treated with prosthesis removal, two-stage debridement and

bone cement spacer and finally knee arthrodesis. The antifungal drugs were used for 3

months after the second debridement surgery. The intertrochanteric fracture was fixed

with Proximal Femoral Nail Anterotation (PFNA) internal fixation during the antifungal

period.) **CASE PRESENTATION** "a sinus effusion" should be corrected into "a sinus

discharge" There is no information in regard to first and second knee aspiration after three

months following TKA. There should be details about the investigations that have been

performed on knee aspirates. Before proceeding to treatment section, identification of

the causative agent has to be mentioned comprehensively. **DISCUSSION** The following

statement is required modification: "Currently, the etiology of fungal infection remains

unclear" should be changed into "Currently, the trigger of fungal infection remains

unclear". The following declaration is inappropriate because the accidental fracture is

unrelated to knee fungal infection: "To the best of our knowledge, there are no reports of

cases with fungal PJI combined with an ipsilateral intertrochanteric fracture."

## RE-REVIEW REPORT OF REVISED MANUSCRIPT

There is no response about the following my previous concern: "Before proceeding to treatment section, identification of the causative agent (Candida parapsilosis) has to be mentioned comprehensively." Candida parapsilosis was mentioned only in the abstract and treatment sections. It should be mentioned in laboratory examinations in details.
