Abstract

The pneumonia caused by the 2019 novel coronavirus (2019-nCoV) outbreak from Wuhan China constitutes a public health emergency of international concern. The gastrointestinal symptoms of vomiting, diarrhea and abdominal pain and the detection of 2019-nCoV nucleic acid from fecal specimens in a small number of patients suggest the possibility of transmission *via* the gastrointestinal tract. People of all ages are vulnerable to this virus, including children. Digestive endoscopy is an invasive procedure during which children
