

We have responded in the previous response to reviewers submitted, and have also copied them here:

Reviewer 1:

1. The title is too broad, which can not reflect the main subject of the manuscript. Did this paper focus on the application of TPO-RAs in patients with CLD with thrombocytopenia? The authors should addressed more details about CLD accompany with thrombocytopenia. 2. The legend of figure 1 should be added.

Response to Reviewer 1: The title has been modified to reflect the main subject of the manuscript, which is the use of TPO-RAs in the perioperative setting in patients with CLD. We also added a legend to Figure 1. Related to the request of reviewer 2, we have added more details in this particular patient type (i.e. patients with CLD and thrombocytopenia) on the complications of thrombotic effects of the portal venous system associated with the use of TPO-RAs. We have provided these additional details in the manuscript submitted on:

- a. Page 9, lines 194-198
- b. Page 10, lines 202-206
- c. Page 11, lines 228-230 and 240-241
- d. Page 12, lines 243-252 and 261-265
- e. Page 14, lines 289-300

Reviewer 2: Authors should focus more precise to the relevant complications of thrombotic effects of the portal venous system.

Response to Reviewer 2: In our revisions made for reviewer 1, we added the complications of thrombotic effects of the portal venous system associated with the use of TPO-RAs in patients with CLD and thrombocytopenia. We have provided these additional details in the manuscript submitted on:

- a. Page 9, lines 194-198
- b. Page 10, lines 202-206
- c. Page 11, lines 228-230 and 240-241
- d. Page 12, lines 243-252 and 261-265
- e. Page 14, lines 289-300
