**Abstract**

**BACKGROUND**

The 2019 novel coronavirus disease (COVID-19) is a major public health emergency with obvious characteristics of human-to-human transmission, and there are infective asymptomatic carriers. Early identification and proper management of patients with COVID-19 are important. Features in chest computed tomography (CT) can facilitate identifying newly infected individuals. However, CT findings of some lung contusions are similar to those

## Common CT Findings of Novel Coronavirus Disease 2019 ...

<https://www.cureus.com/articles/29378-common-ct-findings-of-novel-coronavirus-disease...> ▾

Given the **highly** infectious nature of the **coronavirus disease 2019 (COVID-19)** virus and the lack of proven specific therapeutic drugs and licensed vaccines effective against it, early diagnosis of the **disease** is of paramount importance. The common chest CT imaging of confirmed **COVID-19** cases is discussed here, which shows ground-glass opacity, crazy paving, and consolidation.

## Radiological findings from 81 patients with COVID-19 ...

[https://www.thelancet.com/journals/laninf/article/PIIS1473-3099\(20\)30086-4/fulltext](https://www.thelancet.com/journals/laninf/article/PIIS1473-3099(20)30086-4/fulltext)

**COVID-19** pneumonia manifests with chest CT imaging abnormalities, even in asymptomatic patients, with rapid evolution from focal unilateral to diffuse bilateral ground-glass opacities that progressed to or co-existed with consolidations within 1–3 weeks. Combining assessment of imaging features with clinical and laboratory findings could facilitate early diagnosis of **COVID-19**
