

Dear Dr. Editor,

We appreciate your helpful comments and those of the reviewers.

We feel that the manuscript is now greatly improved.

We have made revisions based on the comments of reviewers. The comments of reviewer I is below, with our changes and clarifications following.

1. Reviewer #1:

Would condense history and physical exam into prose and state when biopsies were performed. Otherwise well-written and interesting.

We agree with reviewer's comments. Therefore, we have made change.

The patient's image was highly suspicious of malignancy, and the patient had multiple masses. The patient didn't undergo biopsy preoperative.
