

## **Answer to the comments**

### **Comments from Reviewer 1**

**Answer: Thanks for your valuable and encouraging comments**

### **Comments from Reviewer 2**

**Answer: Thanks for your kindly suggestion The COMMIT is the abbreviation of the Consensus on Managing Modifiable Risk in Transplantation (COMMIT). COMMIT is an expert-led program. The consensus group is formed to discuss the development of a practical guidance document. The details have been explained in the main text.**

**And we have deleted the recommendation IV based on your suggestion.**

### **Comments from Reviewer 3**

**Answer: Thanks for your kindly suggestions. Abstract has been revised to summarize the importance of MS, the major principles of prophylaxis and treatment of MS based on your advice. The details can be seen in the main text. As for the references used in introduction, since this consensus is a recommendation for Chinese liver transplant recipients, the references used incorporate advances in diagnosis and treatment of metabolic diseases after liver transplantation globally and domestically. The grammatical issue has been corrected.**
