Review: Treatment of eosinophilic esophagitis with swallowed topical corticosteroids

Nennstiel S *et al.* Treatment of EoE with STCs

Simon Nennstiel, Christoph Schlag

Abstract

Eosinophilic esophagitis (EoE) is an emerging chronic local immune-mediated disease of the esophagus. Beside proton pump inhibitors and food-restriction-diets swallowed topical corticosteroids (STC) can be offered as a first line therapy according to current guidelines. This review describes the background and practical management of STCs in EoE. So far, mainly asthma inhalers containing either budesonide or fluticasone have been administered to the esophagus by swallowing these medications "off label". Recently esophagus-targeted formulations of topical

OBJECTIVES: **Swallowed topical corticosteroids (STCs)** are efficacious in inducing and presumably maintaining remission in patients with active **eosinophilic esophagitis (EoE)**. Hitherto, it has not been evaluated whether **long-lasting remission** can be achieved, and whether **treatment** can be stopped once patients have achieved this remission.

Your doctor will consider both your symptoms and test results to diagnose eosinophilic esophagitis. This will include determining whether you have gastroesophageal reflux disease (GERD). Tests to diagnose eosinophilic esophagitis include: 1. Upper endoscopy. Your doctor will use a long narrow tube (endoscope) containing a light and tiny camera and insert it through your mouth down the esophagus. The doctor will inspect the lining of your esophagus for inflammation and swelling, horizontal ring...

Eosinophilic Esophagitis

Medical Condition

An allergic inflammatory condition of the esophagus

An allergic inflammation of esophagus which involves build up of eosinophils in its lining.

🏠 Rare (Fewer than 200,000 cases per year in US)

🔬 Often requires lab test or imaging

👨🏻‍⚕️ Treatment from medical professional advised

🕒 Can last several years or be lifelong

It is usually caused by food allergies or acid reflux. It is characterized by difficulty in swallowing, heart burn, reduced appetite and vomiting. Treatment involves removal of the triggering agents, endoscopy and medications such as PPI and topical corticosteroids.

Symptoms

- Difficulty in swallowing
