

Reply to editor and reviewer:

We are thankful for your positive comments on our manuscript. We have modified the article as reviewer's comments. If there is any other query, we will be happy to answer it. PFA pointwise changes made in the article.

**Reviewer query:** The manuscript is well written, however, there are still a few misspellings and errors, which might lower the quality of this paper. In page 2, "self isolation" should be "self-quarantine", "low and middle income countries" should be "low- and middle-income countries". In page 3, "middle class" should be "middle-class", "Digital Information Security" should be "Digital Information Security". 2. The authors have shown that social software is beneficial for cancer follow-up, however, there was very little evidence. And the safety and reliability of social media applications need more evidence.

**Reply:**

- Misspelling and errors corrected
- self isolation changed to self-quarantine
- low and middle income countries changed low- and middle-income countries
- middle class changed to middle-class
- Digital Information Security changed to Digital Information Security
- Line added that as per current literature safety and reliability of social media applications in follow up of cancer patients need more evidence
