

## Comments to Manuscript 55947

1. The manuscript described that the mass was diagnosed by FNA with subsequent HE stain and immunohistochemistry. Usually the specimen obtained by FNA is of little amount, please confirmed if the tumor was diagnosed by core needle biopsy or FNA.

I have confirmed that the final diagnosis was made by core needle biopsy. Thank you very much.

2. Discussion:

a male:female ratio ➔ a male to female ratio

I have corrected it according to your suggestion. Thank you very much.

3. References:

Majority of the topics in references are smaller case except for the first letter or special term. But the topic of reference # 6 and 11 are not. The authors are obliged to make it consistent in format and meet the requirements of the journal.

I have corrected it according to your suggestion. Thank you very much.

4. Figure and legend

The last arrow of figure 1D should be pleura.

Figure 2. intens ➔ intense

I have confirmed that the last arrow of figure 1D was really pulmonary metastases. And I have corrected it for subpleural pulmonary metastases. Thank you very much.
