SPECIFIC COMMENTS TO AUTHORS

It is an interesting case report about genetic diagnosis history and osteoarticular phenotype of a non-transfusion secondary hemochromatosis. However, the following should be considered: 1. The case is extensively described, and the manuscript overall is too long and should be shortened. 2. The language editing is poor to the degree of confusion. 3. More organization to the manuscript should be performed.

SPECIFIC COMMENTS TO AUTHORS

In the case report entitled “Genetic diagnosis history and Osteoarticular phenotype of a non-transfusion secondary hemochromatosis—Case report”, the authors reported the study of genetic background of a patient with hemochromatosis complicated with psoriasis on both lower extremities. The manuscript is interesting. This reviewer has one minor concern: Abbreviations (such as “CT”, “ERY”, “MRI”, “ANA” ..., etc) should be with its full name when it firstly appears in the paper.

SPECIFIC COMMENTS TO AUTHORS

The Authors present the case report of a patient with osteoarticular phenotype of a non-transfusion secondary hemochromatosis and also describe his genetic diagnosis history . The article is very interesting and little describing in literature. The iconography is well represented. Certainly the history of this patient is long and complicated, but it would be appropriate to try to make the case presentation more smooth and with sequential timing. In addition, in my opinion the article is too long, so I suggest trying to shorten the discussion above all . It is also recommended to follow the guidelines of the authors recommended by the journal for the case reports.
