This review is an overview of the articles on patient-facing health services interventions. From a large number of papers, high quality papers are selected and summarized from the viewpoint of evidence-based medicine, which is a great effort. Its value as a scientific article is high. Revisions; While patient-facing health services interventions are crucial, adopting them to manage cancer deaths is a political decision. Cost assessment is essential for government policy making. Although this review emphasizes EBM, there is little mention of cost effectiveness. If the authors have enough power for revision, please add descriptions for cost-effectiveness. Abstract is insufficient. It seems to be the introduction of the paper, and it is not a summary of the contents. Please fix it.
