Solitary hepatic lymphangioma: a one-case report

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4169228>

In conclusion, we **report** a rare **case** of huge **hepatic lymphangioma** with pedunculated extrahepatic growth in a 41-year-old male. Preoperative examinations were not sufficient to differentiate the nature of the **tumor**. The total resection of the **tumor** resolved all his symptoms, and the pathological finding revealed the true nature of the mass.

Solitary hepatic lymphangioma mimicking liver malignancy: A case report and literature review

Xin Long, Lei Zhang, Qi Cheng, Qian Chen, Xiao-Ping Chen

Abstract

BACKGROUND

Hepatic lymphangioma, a malformation of liver lymphatic system, is a rare benign neoplasm, and usually co-exists with other visceral lymphangiomas. Solitary hepatic lymphangioma is much more rarely seen and could cause a clinical misinterpretation as malignancy.

Jun 01, 1985 · Hepatic lymphangioma is an extremely rare benign tumor, which usually occurs as part of a multiorgan lymphangiomatous involvement. We describe an adult patient with a huge hepatomegaly caused by a diffuse lymphangiomatous infiltration of the liver, which has never been reported before. Extrahepatic localizations could not be demonstrated.
