

Figure Legends

Figure 1 Mucosal manifestations under gastroscopy and enteroscopy. A: Gastroscopy showed diffuse edema and local mucosal erosion, ulcers, and bleeding in the fundus of the stomach; B: Granular and friable changes were observed in the gastric antrum without causing lumen stenosis; C: The mucosa contained edema and erosions in front of the duodenal bulb; D: Continuous superficial ulcers and spontaneous bleeding were observed in the rectum by colonoscopy.

Figure 2 Biopsy specimens from the gastroduodenum and colorectum(hematoxylin and eosin [HE] staining, original magnification ×100). A: Diffuse inflammation accompanied by an abscess in the lesser curvature of the stomach; B: Diffuse

We report a rare case of peristomal pyoderma gangrenosum with severe gastroduodenal lesions, developing after total colectomy in a patient with ulcerative colitis and concomitant cytomegalovirus (CMV) enteritis. A 19-year-old man underwent total proctocolectomy with an ileal J-pouch anal anastomosis and

Sep 28, 2006 · We experienced a very rare **case** of **ulcerative colitis** (UC) accompanied with analogous lesions in the stomach, duodenum, and ileal J -pouch. Ileal J-pouch anal anastomosis was performed on a 29-year old woman in 1996. Six years later, she was admitted again to our hospital because of epigastralgia, nausea, watery diarrhea and low fever.
