## Abstract

### BACKGROUND

Endometrial stromal sarcoma (ESS) is a rare malignant mesenchymal tumor. Early in the disease, the imaging findings of magnetic resonance imaging are similar to that of leiomyoma. When the lesions involved with vascular and cardiac, it might be misdiagnosed as intravenous leiomyomatosis, for which condition is not common in clinic.

## Endometrial stromal sarcoma

Malignant Subtype

Endometrial stromal sarcoma is a malignant subtype of endometrial stromal tumor arising from the stroma of the endometrium rather than the glands. There are three grades for endometrial stromal tumors, as follows. It was previously known as endolymphatic stromal myosis because of diffuse infiltration of myometrial tissue or the invasion of lymphatic channels.
