## Abstract

### BACKGROUND

Breast metastases from colorectal cancer (CRC) represent a very uncommon event. There is obviously no unanimous consensus on the best treatment for this rare condition and management is, especially in elderly patients, not rarely limited to diagnosis and palliative care. Capecitabine, an oral fluoropyrimidine derivative might be helpful in controlling the disease and may provide an option for the treatment of patients unable to receive more aggressive chemotherapy.

## Breast metastasis from colorectal cancer treated by ...

<https://www.ncbi.nlm.nih.gov/pubmed/31860952>

INTRODUCTION: **Breast metastases** from primary **colorectal carcinoma** are extremely rare, with only 45 cases being **reported** previously. Since the most common **malignancy** in the **breast** and axilla is primary **breast cancer** regardless of **cancer history**, **non-hematologic metastases** may be misdiagnosed initially.
