Arthroscopic treatment of iliopsoas impingement syndrome ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6503398>

We performed **arthroscopic tendon** release in all screened patients **after** 6 months of no effective conservative **treatment** (10, 22) with <8 mm of **acetabular** component prominence (). Visual Analogue Scale (VAS) for pain evaluation, Harris **Hip** Score (HHS) for **hip** function and Medical Research Council (MRC) scale for grading the patient's muscle strength on a 0 to 5 scale were performed before ...

Iliopsoas tendonitis following total hip replacement in ...

<https://jor-online.biomedcentral.com/articles/10.1186/s13018-019-1176-z> ▼

May 22, 2019 · As a recognized cause of groin pain following **total hip arthroplasty**, **iliopsoas** tendonitis probably results from different factors. Given the anatomic disadvantage, dysplastic hips theoretically make **acetabular** component relatively retroverted or oversized, screws implanted frequently, and **iliopsoas** tendonitis more likely. However, the prevalence and mechanism of **iliopsoas** tendonitis

Results after arthroscopic treatment of iliopsoas ...

<https://link.springer.com/article/10.1007/s00402-020-03623-z> ▾

A cause of groin pain **after total hip arthroplasty** (THA) is mechanical irritation or impingement of the **iliopsoas tendon**. The incidence is about 4%. If conservative therapy fails, an **arthroscopic** release of the **iliopsoas tendon** can be performed. The aim of the study was to assess the mid-term clinical outcome **after arthroscopic** release. We hypothesize that good results can be achieved by a ...

(PDF) Arthroscopic treatment of iliopsoas impingement ...

<https://www.researchgate.net/publication/330888792...>

Introduction: Impingement between the **acetabular** component and the **iliopsoas tendon** is a cause of anterior pain **after total hip replacement** (THR). **Treatment** can be non-operative, endoscopic or ...

[PDF] Iliopsoas Tendonitis following Total Hip Arthroplasty ...

<https://crimsonpublishers.com/oproj/pdf/OPROJ.000504.pdf>

Iliopsoas tendon dysfunction as a cause of pain after total hip arthroplasty relieved by surgical release. Taher et al. reported that pain after Total ip Arthroplasty (TA) may be due to a number of factors, including dysfunction of the iliopsoas tendon. They reported a case of persistent groin pain after TA.
