

Letter of Explanation

July 20, 2020

To whom it may concern,

I would like to confirm that the study entitled “Optimal Hang Time of Enteral formula at Standard room temperature and High temperature” was in-vitro study and did not involve in any human or animal subjects. Therefore, this study does not have signed informed consent form.

In addition, this is cross-sectional, in-vitro study. Hence, it is not possible to fill CONSORT 2010 checklist and to register in clinical trial registration.

Best regards,

Narisorn Lakananurak MD. MSc.
