SPECIFIC COMMENTS TO AUTHORS

The authors present a detailed account on the surgical treatment of a rare skin neoplasm, with excellent aesthetic results. Most papers on the treatment of microcystic adnexal carcinoma are focused on the use of micrographic surgery, with little attention being given to the technical challenge of the reconstructive surgery. The report is clear and comprehensive on the description of the surgical technique used and stresses the importance of preoperative planning in the treatment of facial skin neoplasms. It would be interesting if more information could be provided on the caption of figure 3, further describing the histological characteristics of microcystic adnexal carcinoma.

SPECIFIC COMMENTS TO AUTHORS

This is a case report of a middle age female with facial microcystic adnexal carcinoma treated by plastic surgical procedure. Surgical procedure itself is not new technique but to consideration of treatment strategy for patients with low mortality malignancy and high risk of poor post-operative quality of life, this case report is valuable. To show benefit and importance more clearly, authors should explain more detail about their first recommended treatment plan that was declined by the patients.
