#### **SPECIFIC COMMENTS TO AUTHORS**

IBD specialists encounter many cases of cutaneous form of IBD extraintestinal manifestations such as erythema nodosum, psoriasis, eczematous lesion and many opportunistic skin or mucosal infections, which are sometimes fatal to the IBD patients. Your case is a extremely rare form of extraintestinal manifestation, but it's original and informative. Because of its rarity, reviewing seems to be sufficient, but I think your case is acceptable. Treatment of PV is not established, but if you give some more treatment experience in detail, it will be better. For example, steroid duration was 3 months, it seems to be longer than traditional steroid regimen. Moreover, if there was a trial of antibiotics, please show us your experience and its response. thank you

#### **SPECIFIC COMMENTS TO AUTHORS**

This report describes the association of pyoderma vegetans nasal localization and ulcerative colitis. My remarks are: • The paper is not structured according to Author's Guidelines • Abbreviations are not fully explained at the first mention • English language requires a native speaker revision • It is unclear whether steroid therapy provoked the disappearance of nasal pyoderma vegetans or only of related local pain •

Why at the first diagnosis, presumably occurred for clinical active disease, the patient was treated only with mesalazine? Was clinical remission supported by endoscopy/histology or by fecal calprotectin assay? • Why Authors did not consider biological treatment? • What about the presence of pyoderma in sites other than nose after steroid treatment? • A section explaining details of this skin lesion is required.

I appreciate you for your effort to share your interesting case and it is helpful for us to widen our experience in managing IBD. Because this case is extremely rare, established treatment regimen is impossible, but your brief reviewing about treatment is improved. If advanced treatment such as anti-TNF, anti-interleukin, JAK inhibitor can be tried for PG or PV like other common EIMs, it will be more attractive and hope so. I expect the long term result as well. Thank you.
