#### **SPECIFIC COMMENTS TO AUTHORS**

The authors offer a nice review of FBS in the context of a 7-month-old girl with cytomegalovirus infection. Despite it is of high interest, minor amendments are suggested: 1) It would be interesting for the reader a more precise explanation for the CMV infection (sequelae? only peripheral blood detection?) 2) Did the authors perform a lymphocyte subset? Did the NGS include analysis for the reported primary immunodeficiencies genes (>400)? Minor typos: VitmineD-> Vitamin D
