

PEER-REVIEW REPORT

Name of journal: World Journal of Cardiology

Manuscript NO: 57155

Title: Pericardial effusion with tamponade: An uncommon presentation leading to the diagnosis of eosinophilic granulomatosis polyangiitis

Reviewer's code: 03821473

Position: Peer Reviewer

Academic degree: MD

Professional title: Doctor

Reviewer's Country/Territory: Japan

Author's Country/Territory: United States

Manuscript submission date: 2020-06-06

Reviewer chosen by: AI Technique

Reviewer accepted review: 2020-06-07 15:32

Reviewer performed review: 2020-06-09 17:12

Review time: 2 Days and 1 Hour

SPECIFIC COMMENTS TO AUTHORS

The manuscript by Loba et al entitled 'Pericardial Effusion with Tamponade: An Uncommon Presentation Leading to the Diagnosis of Eosinophilic Granulomatosis Polyangiitis' describe a case of cardiac tamponade complicated with EGPA, which was confirmed by pericardial and lung biopsy. Isolated cardiac tamponade is rare, and as authors emphasize by the review of other reports, evaluation of pericardial effusion is sometimes not enough to diagnose EGPA. This case indicates the importance of tissue biopsy to diagnose it. This is new and interesting report, but some issues should be revised to make it better.
