Germinomas of basal ganglia and thalamus: Four case reports

Zhen-Chao Huang, Qing Dong, En-Peng Song, Zhi-Jie Chen, Jing-Hua Zhang, Bo Hou,
Zheng-Qi Lu, Feng Qin

Abstract

BACKGROUND

Basal ganglia and thalamus germinomas were often difficult for early diagnosis due to absence of elevated tumor markers and atypical of clinical symptoms and neuroimaging features.

Thalamic germinoma: a challenging diagnosis, case report ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6031045>

Thalamus and basal ganglia germinomas show a male predominance and present as a single **tumor** in most **reported cases** [2, 4]. Progressive weakness, nausea and vomiting are the most common clinical presentation. Some **cases report** that the disease progresses for 2 years until the time of diagnosis [4, 5]. A rapid clinical deterioration is generally associated with intratumor **bleeding**. Most **thalamic and basal ganglia germinoma cases** ...
