#### **SPECIFIC COMMENTS TO AUTHORS**

This is a very interesting case report with regard to Majocchi's Granuloma caused by *Trichophyton Rubrum* after facial injection with Hyaluronic Acid. Nevertheless, several issues have been raised and modifications are required. 1. The Introduction section is too short. Epidemiological data with regard to relevant complications should be added. 2. Apart from histology did you perform any additional laboratory or imaging diagnostic modality? 3. Treatment should be further discussed. 4. In the Discussion section, parallel evaluation with recent studies' evidence is totally missing. Diagnostic as well as therapeutic approach should be analyzed. 5. Newly published manuscripts should be included. 6. Grammatical errors should be corrected throughout the Text. 7. Figures' quality is acceptable.
