**Re: Manuscript ID: diagnostics-812394**

Dear Editorial team,

Please find attached a revised version of our manuscript " **A review of the cardiovascular impact of COVID-19 wit a focus on children**", which we would like to resubmit for publication in **The World Journal of Clinical Cases** after minor revisions.

Your comments and those of the referees were highly insightful and enabled us to greatly improve the quality of our manuscript. In accordance with referees ´suggestions, we attempted the following changes:

1. As suggested we have wrote the conclusions in a tabulated form.
2. We have not included information for general masses. We agree that it is a topic of general relevance, however, we think that WJCC is a scientific journal and we prefer to give information for its scientific readers.
3. Regarding the Figures of the article we have replaced the table 13 with the figure 2. We think that this figure summarizes and illustrates better the cardiovascular management that we think (after our review) that may be performed in children with severe COVID-19.
4. The figure 1 has been uploaded as .jpg format. This figure was directly generated from STATA14 software. It is impossible for us to make it as .ppt format.
5. Figure 2 has bee uploaded as .ppt format. It contains 2 slides. The first one is our preferred format (.jpg) that was generated from the app Graphio 4. This app only exports a .png or .jpg formats. The second slide is a reproduction of the first slide but made directly with power point software. We like this format less, but we send it as indicated by the Editors.
6. As a review article the Audio Cre tip is not necessary.

We hope that the revisions in the manuscript and our accompanying responses will be sufficient to make our manuscript suitable for publication in WJCC. We shall look forward to hearing from you at your earliest convenience.

Yours sincerely,

Moises Rodriguez-Gonzalez
