Extrahepatic cholangiocarcinoma: current status of endoscopic approach and additional therapies

Tantau AI *et al.* Cholangiocarcinoma

Abstract

The prognosis of patients with advanced or unresectable extrahepatic cholangiocarcinoma is poor. More than 50% of patients with jaundice are inoperable at the time of first diagnosis. Endoscopic treatment in patients with obstructive jaundice ensures bile duct drainage in preoperative or palliative settings. Relief of symptoms (pain, pruritus, jaundice) and improvement in quality of life are the aims of palliative therapy. Stent implantation by endoscopic retrograde cholangiopancreatography is

United States Each year, approximately 2500 cases of cholangiocarcinoma occur, compared with 5000 cases of gallbladder cancer and 15,000 cases of hepatocellular cancer. The average incidence is one case per 100,000 population per year. A study by Singal et al found that the frequency of intrahepatic cholangiocarcinoma has increased over time and is most commonly noted in women older than 60 years.[9] International In...
