Dear Editor,

**Re: Confirmation of Authors' Proficiency in English**

This serves to confirm that all authors involved in the write-up of the manuscript titled ***Chronic liver disease following hepatitis B virus infection and HIV co-infection in the context of underlying metabolic syndrome: Current state of the art*** (Manuscript NO: 05242782) are proficient in the English language. For this reason, the manuscript did not require professional English language editing. All authors were educated in Universities where English was the primary medium of teaching and communication. In addition, the authors have written and published all their scientific papers in English.

We trust that you will find all in order.

Sincerely,

A handwritten signature in black ink, appearing to read "Edina".
