Lyon et al. recently examined survival outcomes among patients with metastatic renal cell carcinoma (mRCC) treated with or without complete surgical metastasectomy (SM) during an era when targeted therapy and checkpoint inhibitors were available (). They reported a greater 2-year cancer-specific survival (CSS) in patients who underwent complete SM than in those who did not (84% vs. 54%, ...

<https://www.ncbi.nlm.nih.gov/pubmed/19581746>

Jul 06, 2009 · The literature contained more than 250 cases of pancreatic resection for metastatic renal cell carcinoma. The median duration of presentation was 10.5+/-6.5 years following a nephrectomy. The lesions are multifocal (3.2+/-1.5) in about 39% of patients and resectable in 80%.

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3897349>

In the present case, a protruding type of gastric metastasis was diagnosed at 1.5 years after the diagnosis of RCC, and the patient died 4 months after the last surgery. Review of the English literature in the PubMed database with the key words "renal cell carcinoma" and "gastric metastasis" identified 22 patients (Table 1). 6-9,11 ...

[Solitary pleural metastasis from renal cell carcinoma: a ...](#)

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4560145>

Apr 23, 2015 · A 69-year-old man was admitted to our hospital with a solitary pleural metastasis 6 years after surgery for renal cell carcinoma. Needle biopsy was performed, and the tumor was diagnosed as a metastasis of renal cell carcinoma. The pleural tumor was surgically resected. The patient received interferon-α as postoperative therapy.

Background. Renal cell carcinoma (RCC) confers an unpredictable prognosis due to variable behaviour by histological subtypes, lack of early warning signs, propensity to metastasise and historical resistance to treatment. 1 RCC is 1 of the 10 most common cancers in men and women. It occurs twice as frequently in males, with peak presentation in the sixth and seventh decades. 2 RCC can present ...

Twenty-year survival after iterative surgery for metastatic renal cell carcinoma: A case report and review of literature

Emilio De Raffe, Mariateresa Mirarchi, Riccardo Casadei, Claudio Ricci, Eugenio Brunocilla, Francesco Minni

Abstract

BACKGROUND

The therapeutic approach of metastatic renal cell carcinoma (RCC) represents a real challenge for clinicians, because of the variable clinical course; the recent availability of numerous targeted therapies that have significantly improved overall oncological results, but still with a low percentage of complete responses and the increasing role of

An unusual case of metastatic renal cell carcinoma ...

<https://pubmed.ncbi.nlm.nih.gov/25821299>

Renal cell carcinoma comprises about 2% of adult tumors. The overall 10-year **survival** rate of patients with RCC **after** nephrectomy is about 18-27%. The incidence of **metastasis** of initial RCC is about 24-28%, but this rate **after** nephrectomy is as high as 51%. The most common site of recurrence is the ...
