SPECIFIC COMMENTS TO AUTHORS

This is an interesting case diagnosed by ultrasound with a polyp of 21 mm in the gallbladder wall. The case is rare, and the manuscript is very well written. In this study, the authors used Confocal laser endomicroscopy for the first time to examine the morphology of cholesterol polyps as well as the different parts of normal gallbladder mucosa. So, the confocal laser endomicroscopy should be prioritized in the diagnosis of the gallbladder polyps. I have no specific comments to the authors. Only some minor language polishing should be corrected.

SPECIFIC COMMENTS TO AUTHORS

The case in this study is very well reported. The confocal laser endomicroscopy is used in the diagnosis of gallbladder polyps. Interesting study. I recommend to accept it for publication.
