SPECIFIC COMMENTS TO AUTHORS

the authors did a good job on bibliometric analysis of literature on effect of HIV on orthopedic problems but few changes must be done which are as follows: 1. the title should be modified as "A bibliometric analysis of research on effect of human immunodeficiency virus in orthopedic and trauma surgery". 2. Its a bibliometric analysis of the literature, but a table can be added describing the outcome of all these articles i.e. Surgery outcome, problems related to healing, potential therapeutics etc. 3. all the data is from orthopedic journals listed in Web of science, another para should be added about the research published in virology based journals as I think some important information may have been missed due the current selection of articles or it can be added in limitations. 4. The limited number of articles published from LIC is well-defined but sometimes the physicians are not well-informed about how to get published, this factor should also be added.
