Title of the study: Safety and efficacy of sofosbuvir/velpatasvir/voxilaprevir in post-liver transplant patients with previous DAA failure: a case series.

Manuscript ID: 58117

This letter is to satisfy the Informed Consent Form/Document requirement. Due to the retrospective nature, and because it involved secondary research on already collected data, no consent was required by our institution. This is documented in the IRB with the appropriate Exempt Status. This form has been provided elsewhere in our manuscript submission. That said, verbal consent was obtained from patients prior to inclusion in this case series.

Please contact me if any questions at cory.higley@gunet.georgetown.edu.

Sincerely,
Cory Higley, DO MPH
