### [Primary pulmonary malignant melanoma: Case report and ...](#)

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6119615>

Jul 30, 2018 · Primary malignant melanoma of the lung is an extremely rare pulmonary carcinoma. Only 45 cases have been reported in the literature. Herein, we report a case of a 46-year-old male patient with an O Rh negative blood type who presented with pulmonary bronchial symptoms and underwent lobectomy.

Malignant melanoma is a nonepithelial neoplasm of melanocytes. It is tremendously rare for this condition to primarily involve the respiratory tract, accounting only for 0.01% of the lung malignancies. It often presents as a solitary nodule provoking mass effect and/or obstructive symptom. It most commonly affects patients 50 years old and older, with no gender predilection.

### [Case Report: Primary pulmonary melanoma: the unexpected ...](#)

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3822160>

This case recalls that, although rare, melanoma can be a primary lung tumour. An accurate diagnosis requires detailed investigation and fulfilment of specific criteria and we believe a PET-CT scan may assist this process.
