<https://www.sciencedirect.com/topics/medicine-and-dentistry/mirizzis-syndrome>

Bouveret syndrome is a rare condition characterized by a large, often single, gallstone eroding through the gallbladder wall into the proximal duodenum by way of a cholecysto-duodenal fistula. Once present in the lumen, the stone can result in a mechanical **gastric** outlet obstruction (Fig. 53.5).

Bouveret syndrome masquerading as a gastric mass - unmasked with endoscopic luminal laser lithotripsy

Swetha Parvataneni, Harshit S Khara, David L. Diehl

Abstract

BACKGROUND

Bouveret syndrome, also known as gallstone ileus, is a rare form of gastric outlet obstruction accounting for 1%-3% of cases. This condition is most often reported in females. The diagnosis can be challenging and is often missed due to atypical presentations, which occasionally mimic gastric outlet obstruction symptoms such as nausea, vomiting, loss of appetite and hematemesis. The symptoms vary with stone
